

WHY CHOOSE THE THORGUARDE OVER OTHER MANUFACTURERS

Most manufacturers equip their cabinets with deadbolt or cam lock devices. Even though they are made of steel, many agencies have learned that this solution does not provide adequate security to prevent the cabinets from being pried open. Just ask a SWAT team member how many doors they have pried open using a heavy pry bar. There is nothing to keep the frame from separating.

THE SOLUTION

Performance Custom Cabinets LLC has developed the most secure solution available to date. We utilize a dual rotary latch and shoulder pin system to secure all of our THORGUARDE weapon vaults. These are the same heavy duty latch and pin systems used in vehicle doors. We are the only manufacturer that utilizes Federal Motor Vehicle Safety rated rotary latches, shoulder pins and paddle handles. This locking system, paired with rugged aluminum make them nearly impossible to break into without the use of emergency services rescue tools. Fire Departments all over the country must use hydraulic spreaders because these latching systems just do not separate. You basically have to break the metal to get them to come apart. That is also why this type of system is the ONLY system approved by the FMVS Agency for use on automobile doors. Of course, these vaults are more expensive than less-secure options, but the increase in retention of expensive LE gear and high powered weapons far outweigh the cost difference.

Our standard vault comes with a keyed lock. As an option, we are the ONLY manufacturer offering an Electronic Keyless Keypad, which allows the user to customize their own 5 digit PIN code to access the vault. This keypad is wired directly to the vehicles 12 vdc system. It is unlike other manufacturers that use a wireless keyfob that is susceptible to hacking. With this option, the user doesn't have to fumble for keys while in a hurry or in low/no light conditions. This system can be set to automatically relock itself after 5 seconds, so that the user doesn't have to worry about relocking the cabinet after closing it. They simply close the cabinet and it is locked. As a safety measure, this system also incorporates a hard key override feature. Again, we are the ONLY manufacturer that offers this type of locking system.

Our THORGUARDE vault comes standard in .120 aluminum. Although steel is available, the added weight adds to shipping costs and also wear and tear on the vehicle. Steel is approximately double the weight of aluminum. All of our vaults are powder coated inside and out, and use 250 lb. drawer slides. All vaults have a Lifetime Warranty on the structure for the original purchaser, and can be transferred from vehicle to vehicle without voiding the warranty. This is unlike most manufacturers who only warranty the vault for the original vehicle it was originally installed in.

We are also the only manufacturer of vehicle weapon vaults to receive the recommendation from the National Tactical Officers Association. We submitted our vaults for rigorous testing by the members and are proud to have received their recommendation.

Sincerely,
Hank Scott
